

Introducing TelaFuel® Smart Replenishment™

Tell me how it works.

TelaFuel Smart Replenishment is a robust software tool that automates the collection of site-based inventory, delivery and sales information from automatic tank gauges and/or daily accounting processes. The system uses this data to calculate hourly usage history and to forecast time remaining, usage trend and time remaining with planned order indicators for every tank and product.

TelaFuel graphically presents a site list that summarizes and prioritizes all sites and tanks in sequence according to replenishment need. Large site lists can be separated into user defined groups and dynamically filtered to manage work by exception. The system provides interactive projection tools that use hourly usage history to forecast optimal loads and pinpoint delivery windows.

Smart Replenishment enables planned orders to be created and managed through all steps in the delivery process. The order process supports complex orders with multiple supply sources and multiple destinations. Interactive projection tools are accessible from within the order process to forecast and plan optimal split loads. Planned orders can be assigned to bulk carriers or visually scheduled using internal transportation resources to create dispatch plans for trucks and drivers.

The system includes a powerful management reporting capability to measure inventory levels, monitor inventory high and low exceptions, manage excess inventory, view orders by status, review scheduled orders and analyze average load sizes and split / retain activity.

What are the benefits?

TelaFuel Smart Replenishment customers achieve measurable improvements in their fuel replenishment operation. Typical customer benefits include:

- Optimizing inventory results in sizeable reductions in excess in-ground inventory
- Improving delivery forecasting results in notably fewer run-outs, diversions and split loads
- Increasing average load sizes hauled results in lower transportation costs
- Better carrier management results in fewer mistakes and improved carrier charge-backs
- More efficient dispatching results in increased productivity per dispatcher

All TelaFuel solutions are provided as hosted, on-demand software services that significantly reduce time-to-benefit without up front capital investment or costly I/T infrastructure and support.

Where can I find more information?

TelaPoint is the leading provider of Internet-based fuel inventory and order management, purchasing, invoice reconciliation and fleet scheduling solutions in the Petroleum and Convenience Store industry.

TelaFuel solutions are industry proven and in use by many leading convenience store, travel center, hypermarket, wholesale marketing and bulk carrier companies throughout the United States.
